CLAIM

What I claim as my new invention is: **The Water Pressure Driven Wet and Dry Shaver with Beard Trimmer, Water Clean-out, and Speed Control comprising:**

1. A small water turbine connecting to the household's water system via a diverter to the sink or to the shower or to any similar water source with sufficient pressure as it becomes the driving power source for this invention as an alternate for battery or electricity, therefore totally submersible and water proof wet and dry shaver.
2. A water flow control valve, by changing the water volume passing to the small turbine it controls the speed of the turbine, therefore the shaving speed;
shaver turbine as in claim one may transfer the power to drive the shaving head by means of gears, of by using eccentric cam to create an oscillating motion for the flat type of shavers.
3. An internal clean out nozzle controlled by a water-controlling valve when depressed, flushes out hair particles from the shaving area, since my invention has no electric parts, it is 100 % waterproof, it is submergible it is a true wet and dry shaver.
